Principal objective

I want to make an 50 min. TV -documetary about the science that is beeing done at Ny Ålesund , Svalbard.

Project summary

The TV-documetary will show the scientific methodes and results from some of the science programs going on at Ny Ålesund, Svalbard. I will stress that this is a marginal place for life and thats why it is an eye for what is going on when it comes to pollution and climate change.
